Graph of **Telemetry Exam** results based on 6,800 administered tests

Our nationally validated exams were developed to determine a nurse or healthcare professional's skill and qualifications in their specialty. The NurseTesting system identifies the most important aspects of each clinical specialty and establishes the professional's capacity to apply their knowledge and deliver safe, effective patient care.

NurseTesting.com's exams are used by over 300 Hospitals, Healthcare Staffing Firms, and other healthcare institutions worldwide.

Validity: The content of our clinical nursing exams was developed and refined through many sources: clinical experience, interviews with staff nurses, clinical experts and nursing educators at leading national healthcare facilities. Validity for each of our exams was established by a panel of experts using results from sample tests filled out by nurses with experience ranging from new graduates to those with over 20 years of experience. Clinical Exam questions contain multiple choice options and measure the recall of information and the application of basic knowledge in practice situations. Exams are updated annually to reflect the most current trends in Nursing Practice.
